

Front Runner

Truck Mounted Grader/Rake

- Fits on the front of a ¾ or 1 ton truck in place of the snowplow blade
- Allows natural front facing operation for ease and visibility
- Utilizes the existing plow hoist and power angling controls
- Designed for convenience of highway transport
- Provided with all components necessary to go right to work as shown here on a Fisher Minute Mount

HEAD: 8'1" wide with 38 heavy duty 5/16" x 1½" x 33' tines at 1" spacing. Tines are easily replaced when necessary.

WHEELS: 16" O.D. pneumatic highway type with tapered roller bearings. Easily adjustable for digging and crowning, and for removal for highway travel without tools.

TWO PIECE ARTICULATING "A" FRAME & COUPLER:

Standard equipment to allow operator control of the digging and feathering motion of the tines. Coupler hooks directly to the two plow pivot points under the truck and is designed for the particular brand of snowplow.

Crowning feature... vertical slots where "A" Frame attaches to coupler allow the unit to be tipped from side to side for crowning and floatation.

THREE POSITION CONTROL LEVER: Locks out articulating action for RAKING ONLY, provides extra lift for HIGHWAY TRAVEL, and allows double-hinged articulating action for normal GRADING operations.

POWER ANGLE CYLINDERS: (Optional) Identical to Fisher style 12" stroke, 1" pin size. Cylinders and hoses can be purchased with unit or can be transferred from snowplow for purposes of economy, or for emergency.

18" HEAD EXTENSION: Can be installed on either end of head. Extension is hinged so it can flip over onto head or be easily removed without tools for highway transport.

WEIGHT: approximately 700 lbs.
